Project Title: [Portfolio Aude Falco] [AF society]
[9 09 2017]

1. GENERAL INFO

Client Contact Details	· [FALCO] · [Web Developer at junior level]
Technical staff involved in the project:	Aude Falco as a complete beginner in the app web dev
Do you have any apps made in the past?	Nope - First one
Budget and Timing:	Schedule as defined by the Access Code School

2. APP DETAILS

App Outline [Why do you need this app?] [What's this app should do?]	The app is a Portfolio and will develop the main key points: • Technical competences • Education • Personal details The app will consist in a short introduction of the client and will contain links to social medias and projects of the client. The app will be available in English and in French.
Devices	[Phone, Tablet]
Platforms Accessibility	[IOS, Android]
Briefly describe the concept of the app	The one page app is laid out with four main parts defined with three semantic SVG/PNG for the three following parts: ➢ Diplomas ➢ Technical skills ➢ Projects The presentation area for the client will be defined directly in the required/available space
Do you have any creative/design specifications for the application?	➢ 2D effects may be used to transition to projects part. ➢ Burger menu to give direct access to the social medias. See three bullet points are apparently used for these. ➢ SVG may be interactive or at least animated
Do you have 'Wireframes' for the app?	YES - see attached.
What content will be included in the app? What is the required functionality?	Highlights of the SVG/PNG images are revelled by user clicking. The technical skills are shown in a modal. The education and the projects bits bring to a new page as a form of a list. Links allow for the access of a specific project page. This is a one page giving the information relative to the project itself such as date, main work and graphic representation of the tasks. A back button to main page is supplied for the pages related to projects. The education area brings to a list of training centre and universities. Links bring to their respective websites. A side bar contained in the burger menu displays social medias and link to projects and contact form.
